

SHR - ShareRing

Project Overview - The world's most secure and flexible identification system. You can safely store and control personal vaccination data along with other health data. The ShareRing app also makes travelling easy as you can purchase flights, hotels and travel arrangements for your trip whilst safely storing your boarding pass and digital passport on one platform. This is the ShareRing ID which can streamline data to and from governmental departments to enhance trust when providing documents.

My Thoughts on SHR - The ShareRing team works directly with governments to provide global services in the travel industry, along with a system to store documents such as your passport and vaccination certificates. The app also makes E-commerce easy providing everything in one platform safely securing your identity and data. In time the platform could potentially be processing billions of transactions every year. Fundamentally ShareRing is one of the strongest projects I have ever come across and we believe it could be a multi-billion dollar market cap project.

Unique Features - Privacy is fundamental to the ShareRing ID so you can decide who can consume or share your data. You can send verifiable certificates and credentials for job applications or course enrolments.

The ShareRing app allows you to shop on your favourite websites and eliminates the need for passwords by using your ShareRing ID. ShareLedger can revitalize charities by ensuring trust, transparency and security at every point in the fund donation and distribution process.

Where to Buy - Kucoin, Uniswap, Bithumb.

Tokenmetrics - Total Supply - 4,396,000

When you hold and stake your SHR you earn flowbacks, these flowbacks earn you SHR tokens and they also raise the price as they are purchased directly from the market using fees generated by the network.
